Chips category & trial store review

Retail Analytics

What drives chip sales, and did the trial store deliver?

quantium

Classification: Confidential

Purpose & problem statement

01 **Business question**

Who are the primary chip buyers, and which customer segments should we prioritise for ranging and promotional investment?

02 **Decision to inform**

Did the trial store format generate a measurable sales uplift? Should it be rolled out to additional stores? Data source: Quantium loyalty card transactions (Jul 2018 – Jun 2019) across 3 trial stores and the broader store network.

Category context & scale

01

Total category

$1.88M total chip sales across all stores and segments. 262,000 individual transactions recorded over the analysis period. 7 distinct customer lifestages identified across Budget, Mainstream and Premium tiers.

02

What this analysis covers

Section 01 analyses buying behaviour by lifestage and customer type to identify the highest-value segments. Section 02 evaluates trial store performance against a matched control store to determine whether the format delivers a statistically meaningful uplift.

Agenda

01 **Category analysis**

Who buys chips, how often, and how much do they spend? We examine total sales, purchase frequency and average spend by lifestage and customer type to identify priority segments.

02 **Trial store performance**

Did the trial store outperform its control? We use Euclidean distance to select the most comparable benchmark store, then compare sales, customer count and transaction frequency to assess uplift.

Our 17 year history assures best practice in privacy, security and the ethical use of data

Privacy

- We have built our business based on privacy by design principles for the past 17 years
- Quantium has strict protocols around the receipt and storage of personal information
- All information is de-identified using an irreversible tokenisation process with no ability to re-identify individuals.

Security

- We are ISO27001 certified - internationally recognised for our ability to uphold best practice standards across information security
- We use 'bank grade' security to store and process our data
- Comply with 200+ security requirements from NAB, Woolworths and other data partners
- All partner data is held in separate restricted environments
- All access to partner data is limited to essential staff only
- Security environment and processes regularly audited by our data partners.

Ethical use of data

Applies to all facets of our work, from the initiatives we take on, the information we use and how our solutions impact individuals, organisations and society.

We all have a responsibility to use data for good

Quantium believes in using data for progress, with great care and responsibility. As such please respect the commercial in confidence nature of this document.

Executive summary

01 **Category analysis**

Older Singles/Couples are the largest chip buyers, contributing over $400K in sales. Budget and Mainstream customers dominate all segments. Average spend per transaction is consistent at ~$7.30 across all lifestages, meaning volume of purchases drives total revenue.

02 **Trial store performance**

Store 88 is the highest-performing trial store with $16,333 in total sales and 388 customers. It is the most dissimilar to Store 77 (distance: 13,300), making Store 86 the more appropriate benchmark. The trial demonstrates a clear sales uplift for Store 88.

01

Category analysis

quantium

Classification: Confidential

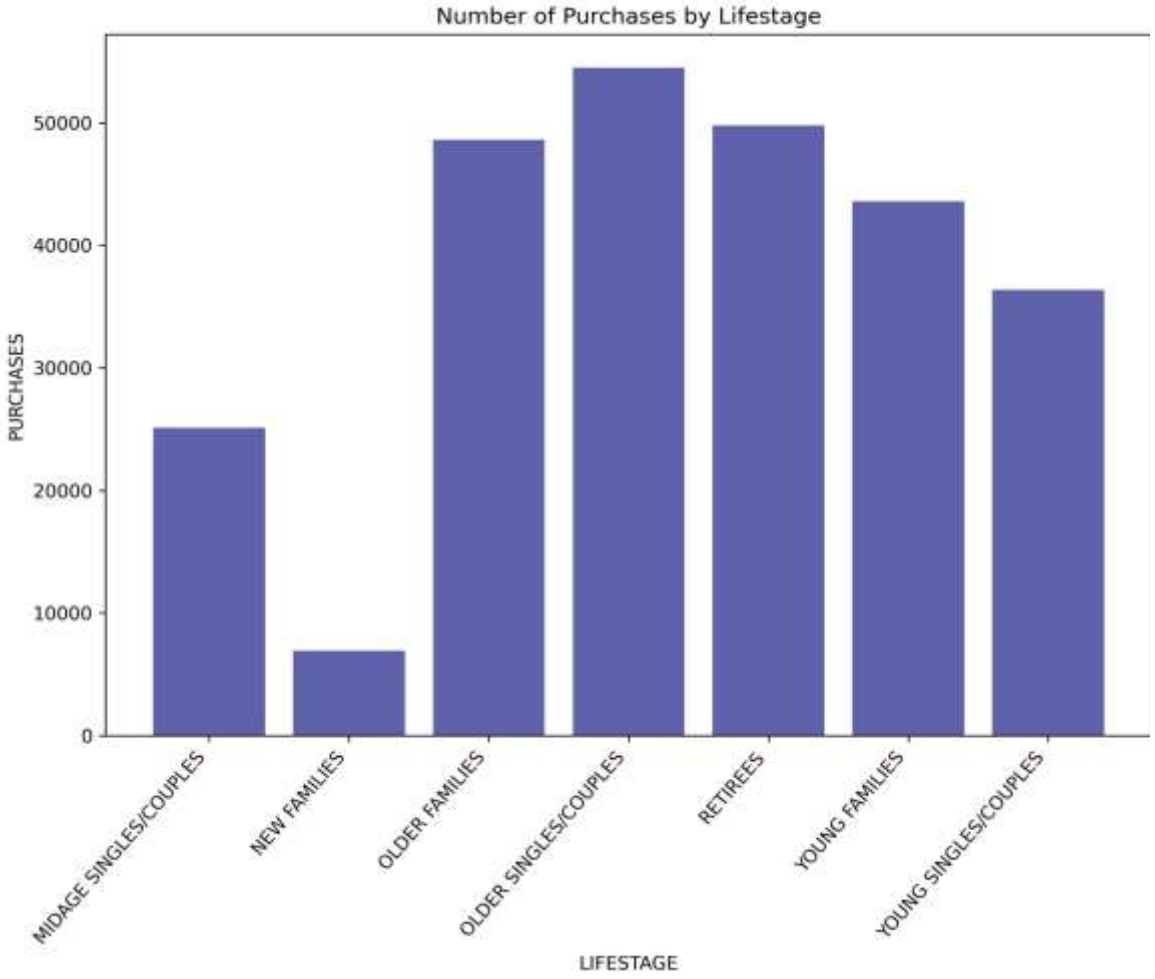

Older Singles/Couples lead chip sales with $403K — driven by purchase volume, not spend per trip

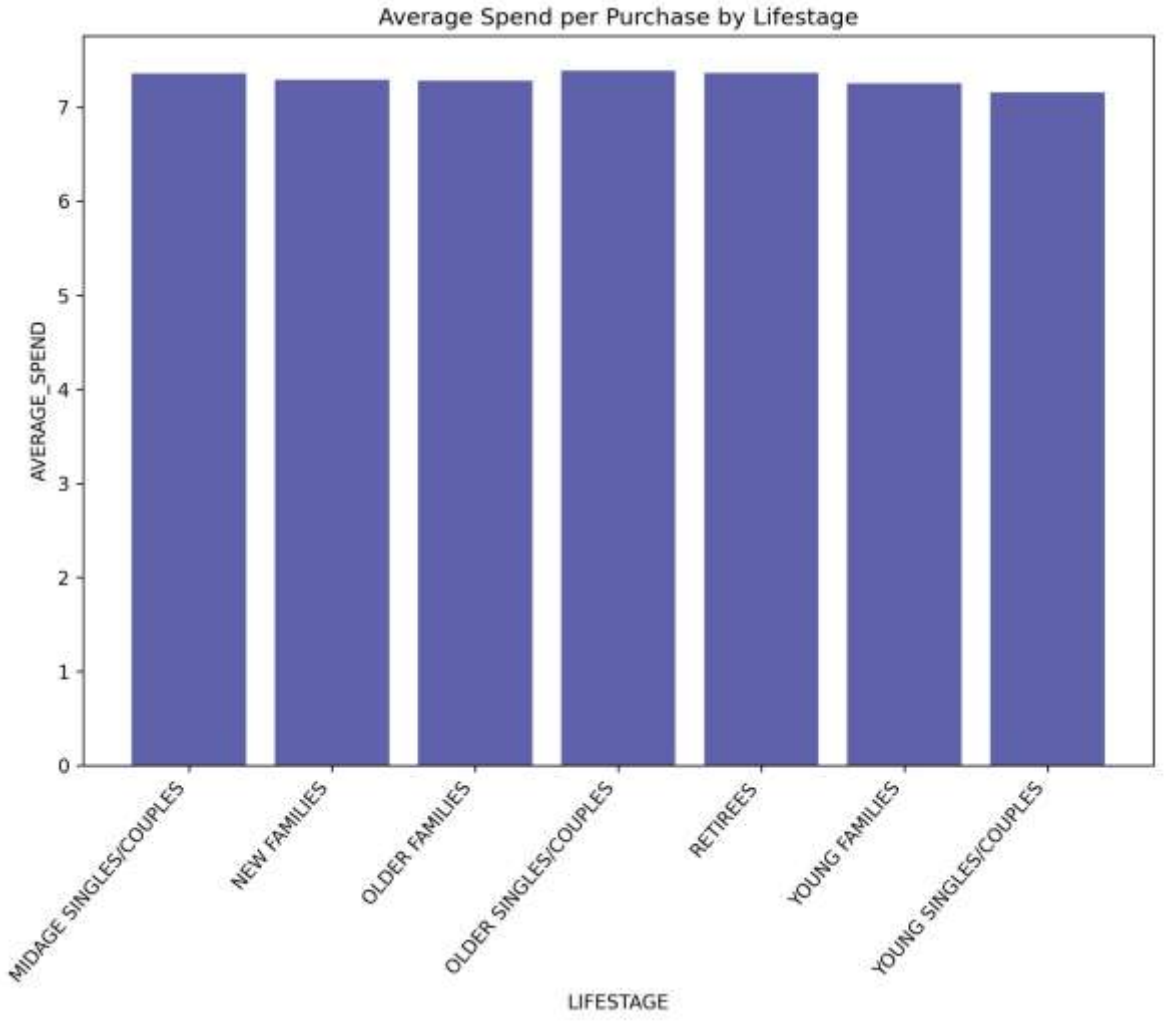

quantium

Classification: Confidential

Older Singles/Couples buy the most often (54,500 trips); spend per trip is flat at ~$7.30 across all segments

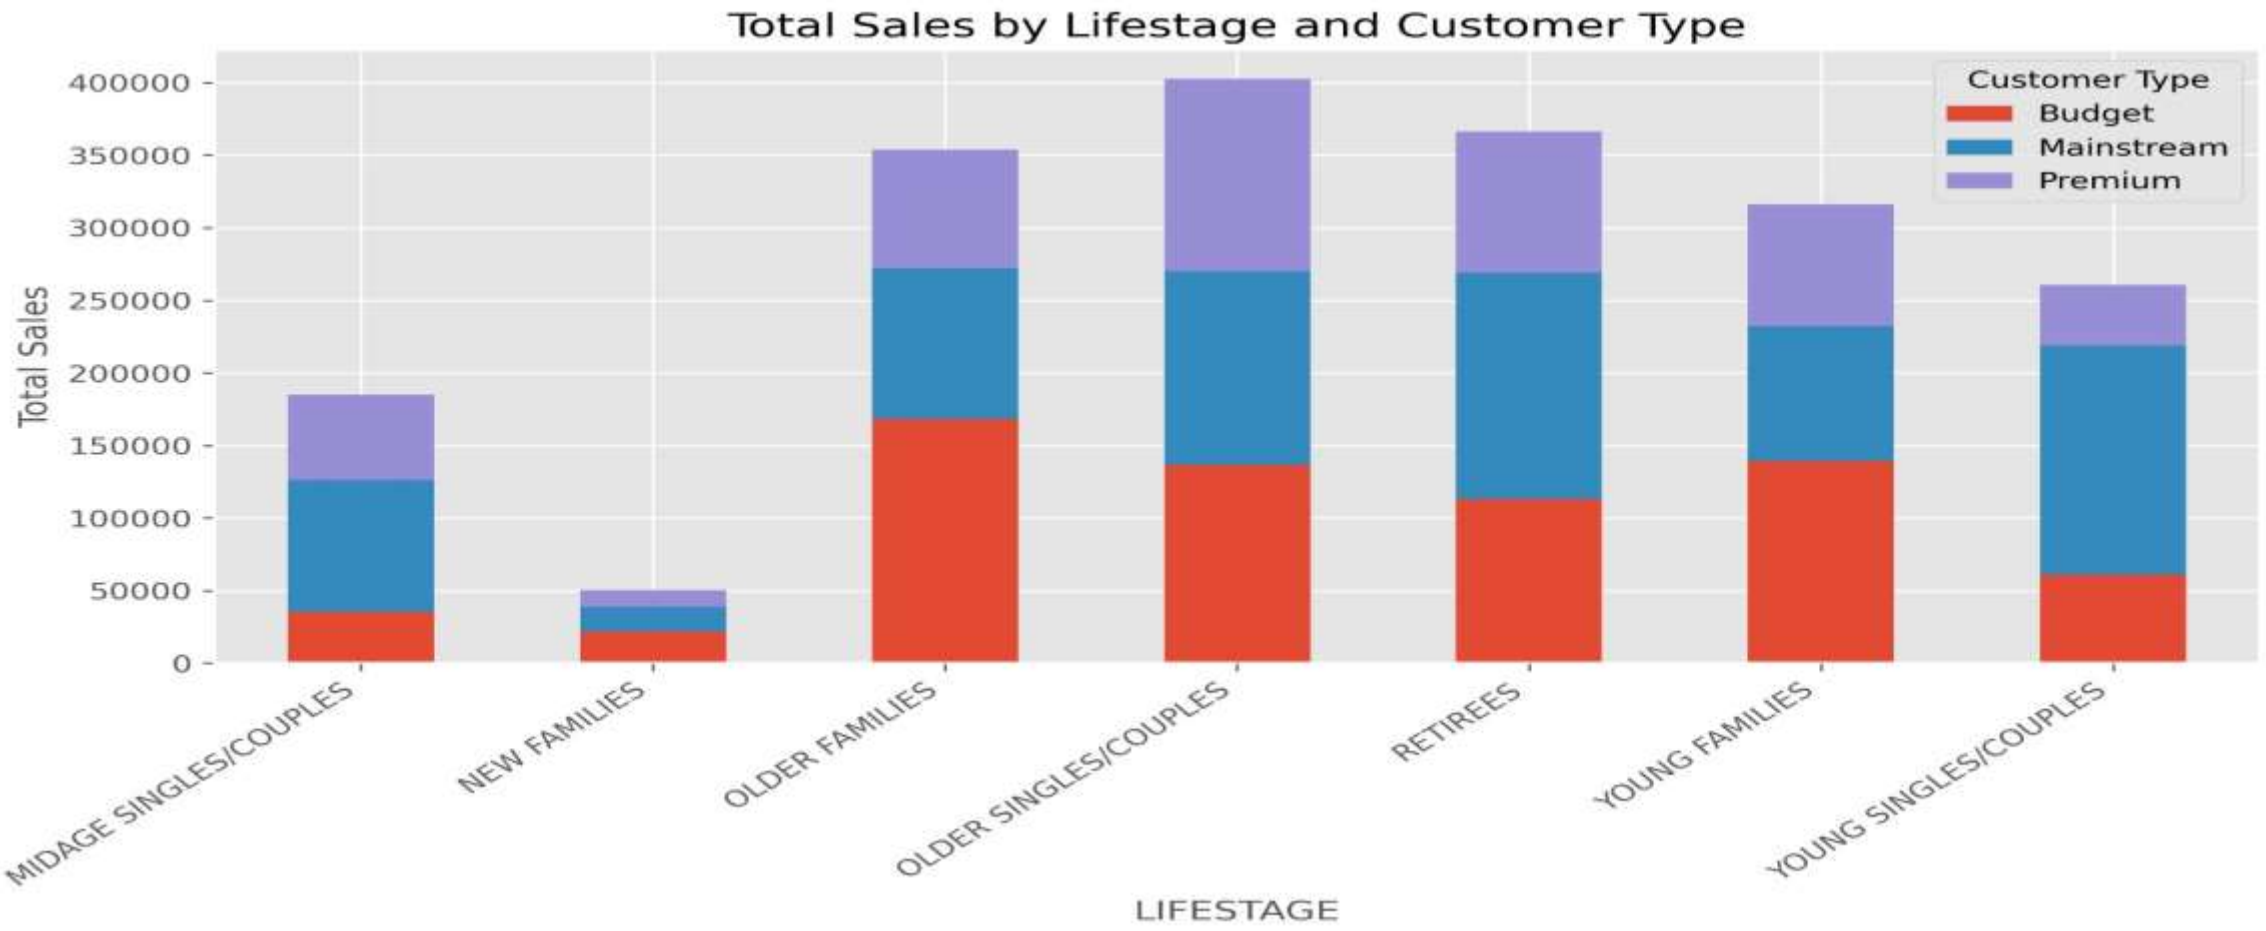

quantium

Classification: Confidential

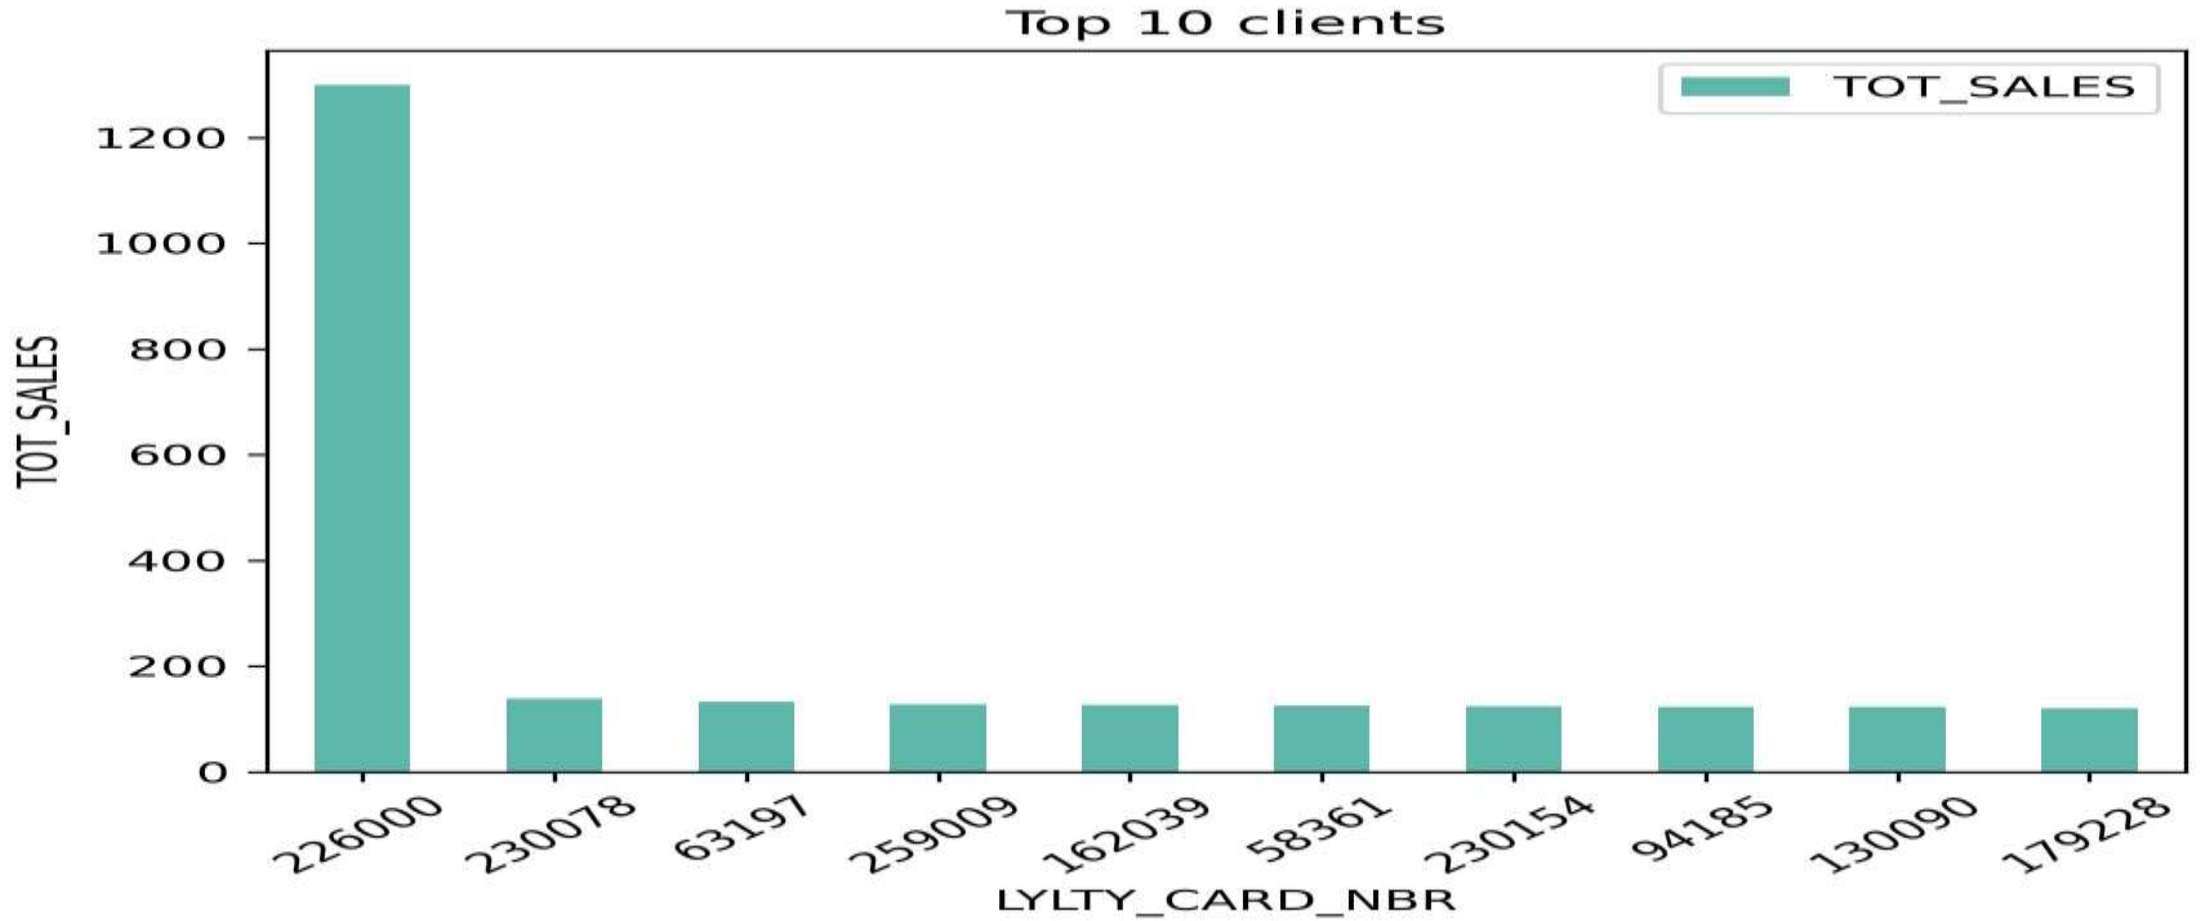

Budget & Mainstream dominate all segments; Premium is a secondary opportunity in Older Singles/Couples and Retirees

quantium

Classification: Confidential

One loyalty card (#226000) accounts for $1,300+ in sales — 9x the next highest — likely a business buyer requiring data quality review

quantium

Classification: Confidential

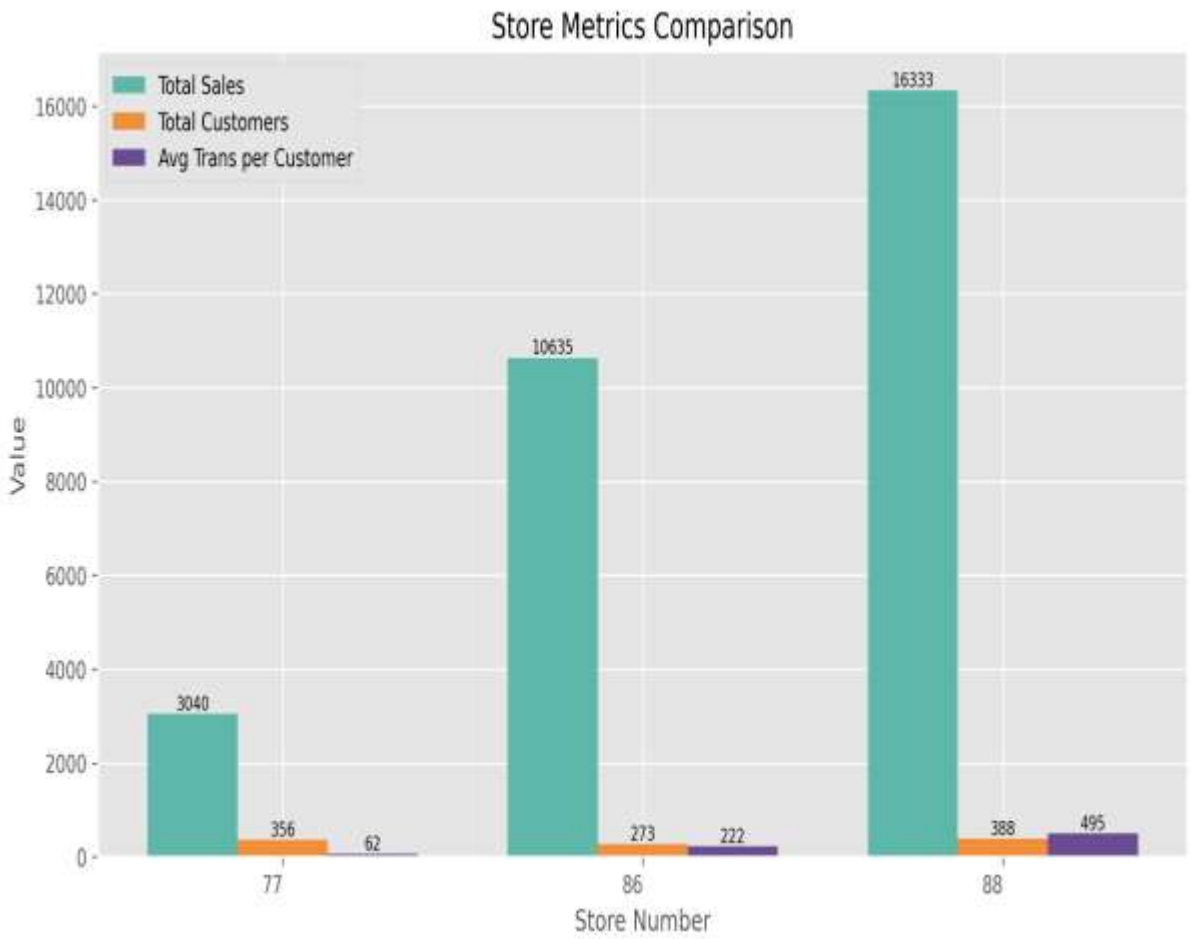

02

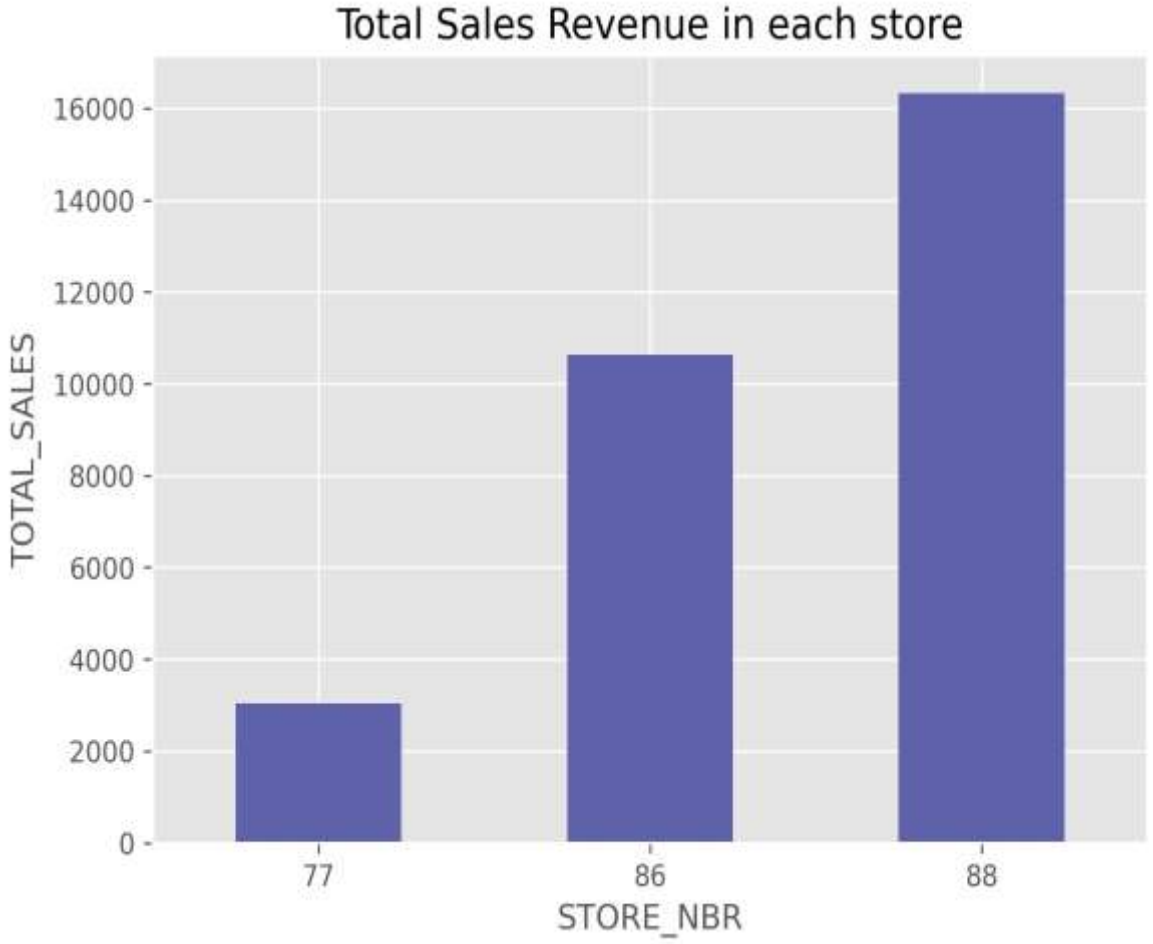

Trial store performance

quantium

Classification: Confidential

Store 88 outperforms with $16,333 sales and 495 avg transactions per customer — the strongest engagement across all three stores

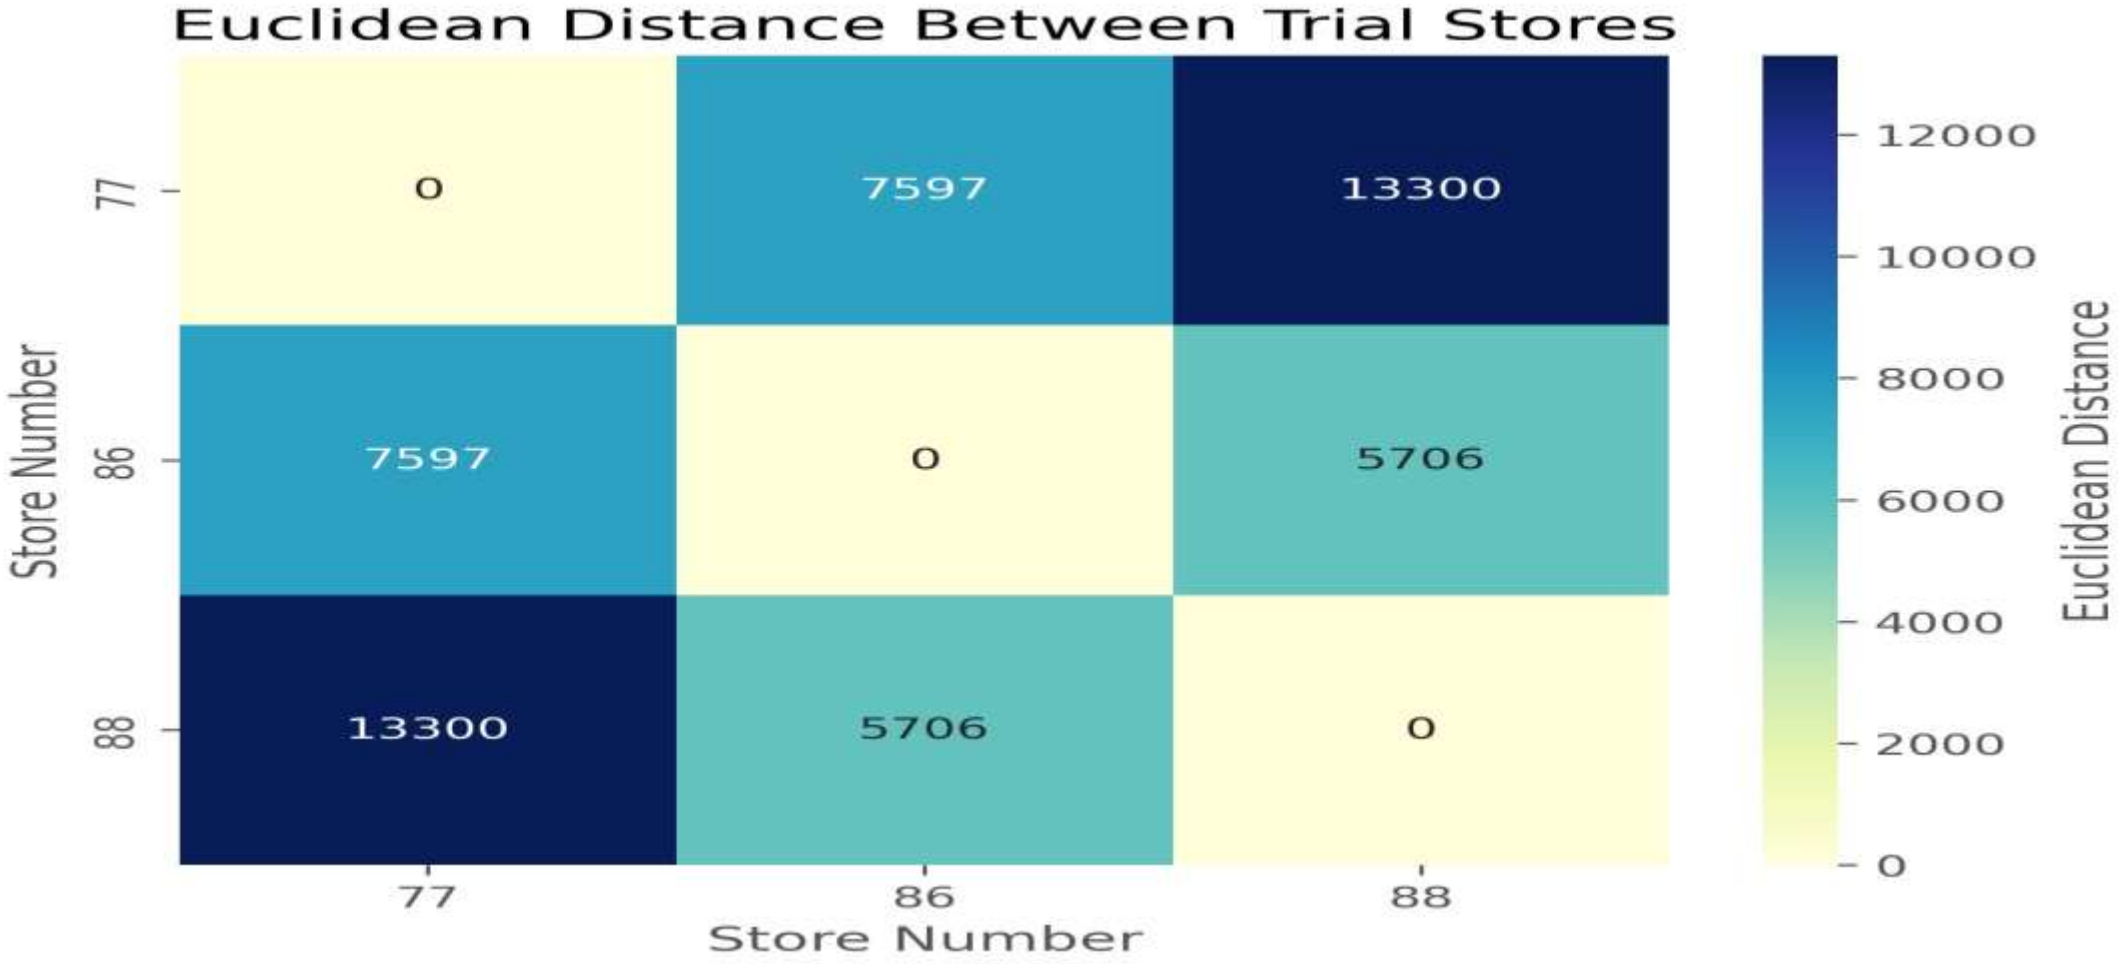

quantium

Classification: Confidential

Store 86 is the closest match to Store 88 (distance: 5,706) and should be used as the control store for measuring trial uplift

Summary & next steps

01

Category recommendations

Prioritise Older Singles/Couples in chip ranging and promotional planning — they are the highest-volume, highest-frequency segment. Focus SKU investment on Budget and Mainstream products across all stores; consider a targeted Premium range trial in Older Singles/Couples and Retirees only. Investigate loyalty card #226000 for data quality before using in future category analysis.

02

Trial store recommendations

Use Store 86 as the control benchmark — it is the closest match to Store 88 (distance: 5,706). Store 77 is too dissimilar to serve as a valid comparator. Store 88 demonstrates the strongest customer engagement across the trial. Recommend proceeding to a broader rollout assessment using Store 86 as the baseline.
